Week 6-2: Asympt

Add Wechat edu_assist_pro

Giulia Alberini, Fall 2020

WHAT ARE WE GOING TO DO IN THIS VIDEO?

- Analysis of algorithms

Assignment Project Exam Help

- Asymptotic notation

<https://eduassistpro.github.io/>

- Big-Oh, $O(\cdot)$

Add WeChat edu_assist_pro

- Coming next

- Big-Omega, $\Omega(\cdot)$
 - Big-Theta, $\Theta(\cdot)$

ANALYSIS OF ALGORITHMS

- Often we are interested in knowing how much time an algorithm needs to perform a given task.
- Typically, the time t ends on the input and it grows with the size of such input. They usually describe the running time of an algorithm with a *function* of the size of its input.
- What do we mean by “size of input”?
What do we mean by “running time”?

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

SIZE OF INPUT, RUNNING TIME

- The notion of *input size* depends on the problem being studied, and it can therefore vary depending on the algorithm analyzed
 - It can be the number of elements in the input (e.g. the length of an array)
 - It can be the number of operations in the input (e.g. when multiplying two numbers)
 - It can be described by multiple numbers rather than one (e.g. algorithms that work with graphs)
- The running time of an algorithm is the number of primitive operations (e.g. evaluating an expression, assigning a value, returning from a method,...) executed.

Where t_i is the number of times the condition of the while loop is checked for the specific i

EXAMPLE – INSERTION SORT

```
insertionSort(list) {  
  for i from 1 to n-1 {  
    element = list[i]  
    k = i  
    while(k>0 && el  
      list[k] = list[k-1]  
      k--  
    }  
    list[k] = element  
  }  
}
```

Cost	Times
c_1	n
c_2	$n - 1$
c_3	$n - 1$
c_4	$\sum_{i=1}^{n-1} t_i$
c_5	$\sum_{i=1}^{n-1} (t_i - 1)$
c_6	$\sum_{i=1}^{n-1} (t_i - 1)$
c_7	$n - 1$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE – INSERTION SORT

Cost	Times
c_1	n
c_2	$n - 1$
c_3	$n - 1$
c_4	$\sum_{i=1}^{n-1} t_i$
c_5	$\sum_{i=1}^{n-1} (t_i - 1)$
c_6	$\sum_{i=1}^{n-1} (t_i - 1)$
c_7	$n - 1$

So, we can represent the running time of insertion sort as a function of the size of its input as follows:

<https://eduassistpro.github.io/>

$$T(n) = c_1 n + c_2 (n - 1) + c_4 \sum_{i=1}^{n-1} t_i + c_5 \sum_{i=1}^{n-1} (t_i - 1) + c_6 \sum_{i=1}^{n-1} (t_i - 1) + c_7 (n - 1)$$

Even for inputs of the same size, the running time might be different.

EXAMPLE – INSERTION SORT BEST CASE

$$T(n) = c_1n + c_2(n - 1) + c_3(n - 1) + c_4 \sum_{i=1}^{n-1} t_i + c_5 \sum_{i=1}^{n-1} (t_i - 1) + c_6 \sum_{i=1}^{n-1} (t_i - 1) + c_7(n - 1)$$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

The best case occurs when the array is already sorted. In this case, the condition of the while will be checked only once. That is $t_i = 1$. Therefore,

Add WeChat edu_assist_pro

$$\begin{aligned} T_{best}(n) &= c_1n + c_2(n - 1) + c_3(n - 1) + c_4(n - 1) + c_7(n - 1) \\ &= (c_1 + c_2 + c_3 + c_4 + c_7)n - (c_2 + c_3 + c_4 + c_7) \end{aligned}$$

Which we can express as $T_{best}(n) = an + b$, for some constants a and b .

EXAMPLE – INSERTION SORT WORST CASE

$$T(n) = c_1 n + c_2(n-1) + c_3(n-1) + c_4 \sum_{i=1}^{n-1} t_i + c_5 \sum_{i=1}^{n-1} (t_i - 1) + c_6 \sum_{i=1}^{n-1} (t_i - 1) + c_7(n-1)$$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

The worst case occurs when t is sorted, but in the reverse order. In

this case, $t_i = i + 1$ for all i . Add WeChat edu_assist_pro

Note that

$$\sum_{i=1}^{n-1} (i+1) = \sum_{i=2}^n i = \frac{1}{2}n(n+1) - 1$$
$$\sum_{i=1}^{n-1} i = \frac{1}{2}(n-1)n$$

EXAMPLE – INSERTION SORT WORST CASE

$$T(n) = c_1n + c_2(n-1) + c_3(n-1) + c_4 \sum_{i=1}^{n-1} t_i + c_5 \sum_{i=1}^{n-1} (t_i-1) + c_6 \sum_{i=1}^{n-1} (t_i-1) + c_7(n-1)$$

Assignment Project Exam Help

The worst case occurs when the array is in the reverse order. In this case, $t_i = i + 1$ for all i . Therefore,

<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

$$\begin{aligned} T_{worst}(n) &= c_1n + c_2(n-1) + c_3(n-1) + c_4 \left(\frac{1}{2} n(n+1) - 1 \right) + (c_5+c_6) \left(\frac{1}{2} n(n-1) \right) + c_7(n-1) \\ &= \frac{1}{2} (c_4 + c_5 + c_6) n^2 + \left(c_1 + c_2 + c_3 + c_7 + \frac{1}{2} (c_4 + c_5 + c_6) \right) n - (c_2 + c_4 + c_5 + c_8) \end{aligned}$$

Which we can express as $T_{worst}(n) = an^2 + bn + c$, for some constants a , b , and c .

"BIG-PICTURE" APPROACH

- When we analyze algorithms we use what is referred to as "the big-picture" approach. What we care about is the growth rate of the running time. We look at how the running time grows as the size of the input increases in the limit, as the size of the input n goes to infinity.

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- To perform this analysis:
 - Find the running time as a function of the input size
 - Use asymptotic notation to express this function

ASYMPTOTIC NOTATION

- Asymptotic notations apply to functions.

Assignment Project Exam Help

- We will use asymptotic notation to describe the running time of algorithms.

This means that the function $f(n)$ describes the running time of algorithms. <https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- In general, asymptotic notation can be applied to functions that describe other characteristics of an algorithm, or functions that have nothing to do with algorithms.

TOWARDS A FORMAL DEFINITION OF BIG OH

Let $T(n)$ be a function that describes the time it takes for some algorithm to terminate on input size n .

Assignment Project Exam Help

We would like to express $T(n)$ asymptotic behavior.

<https://eduassistpro.github.io/>

as n becomes large i.e.

Add WeChat edu_assist_pro

Unlike with limits, we want to say that $T(n)$ grows like certain simpler functions such as $\log_2 n$, n , n^2 , ..., 2^n , etc.

PRELIMINARY (INCOMPLETE) FORMAL DEFINITION

Let $f(n)$ and $g(n)$ be two functions, where $n \geq 0$.

We say that $f(n)$ is asymptotically bounded above by $g(n)$ if there exists n_0 such that,

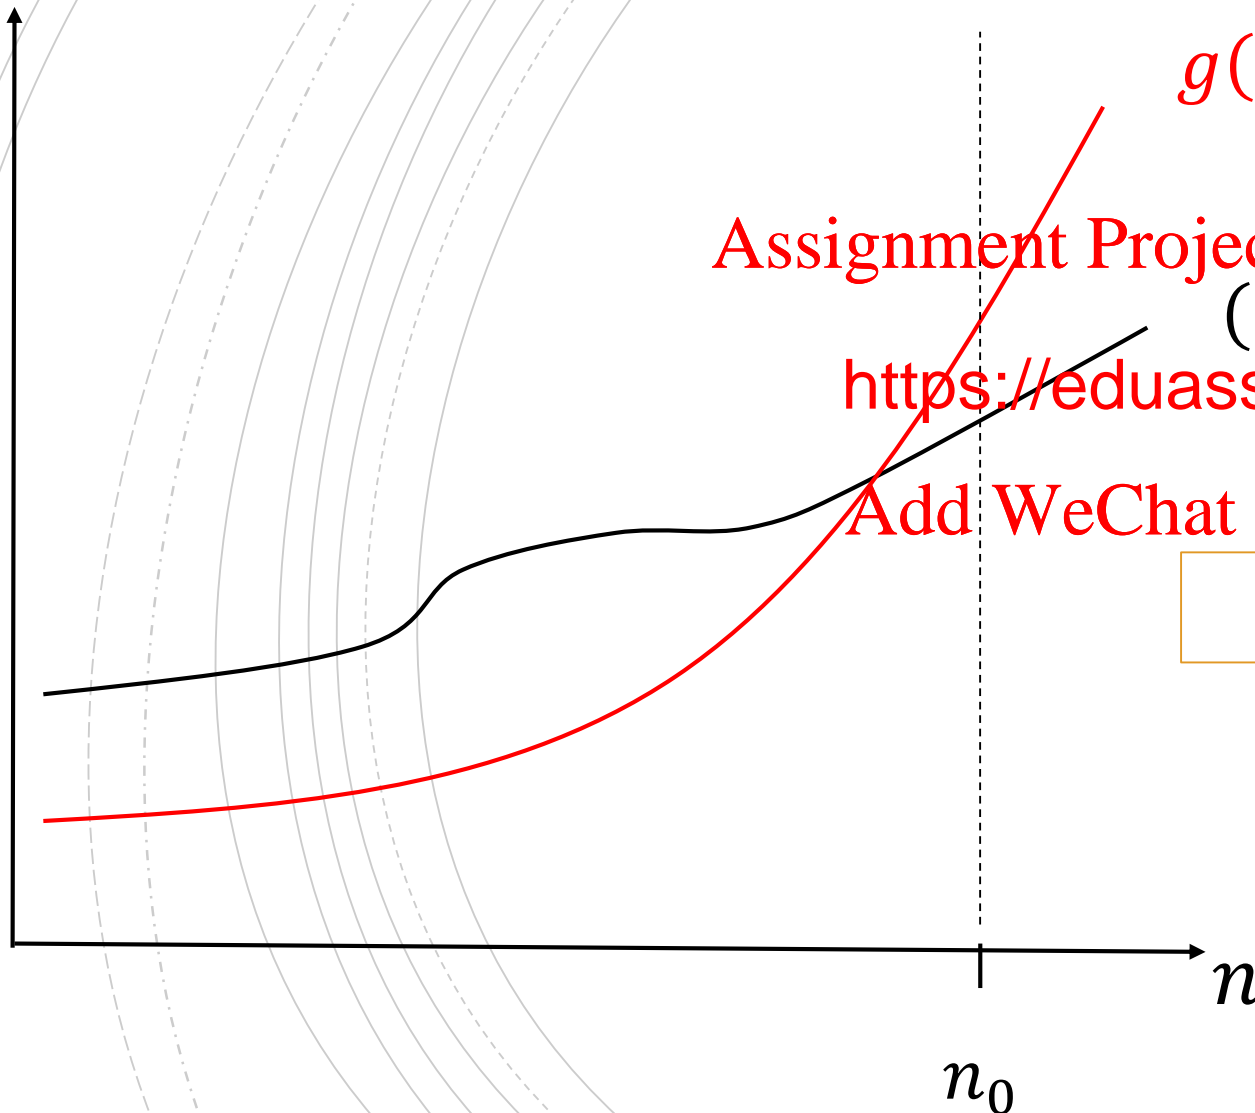

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

$$f(n) \leq ()$$

This is not yet a formal definition of *big O*.

GRAPHICALLY

$g(n)$

Assignment Project Exam Help

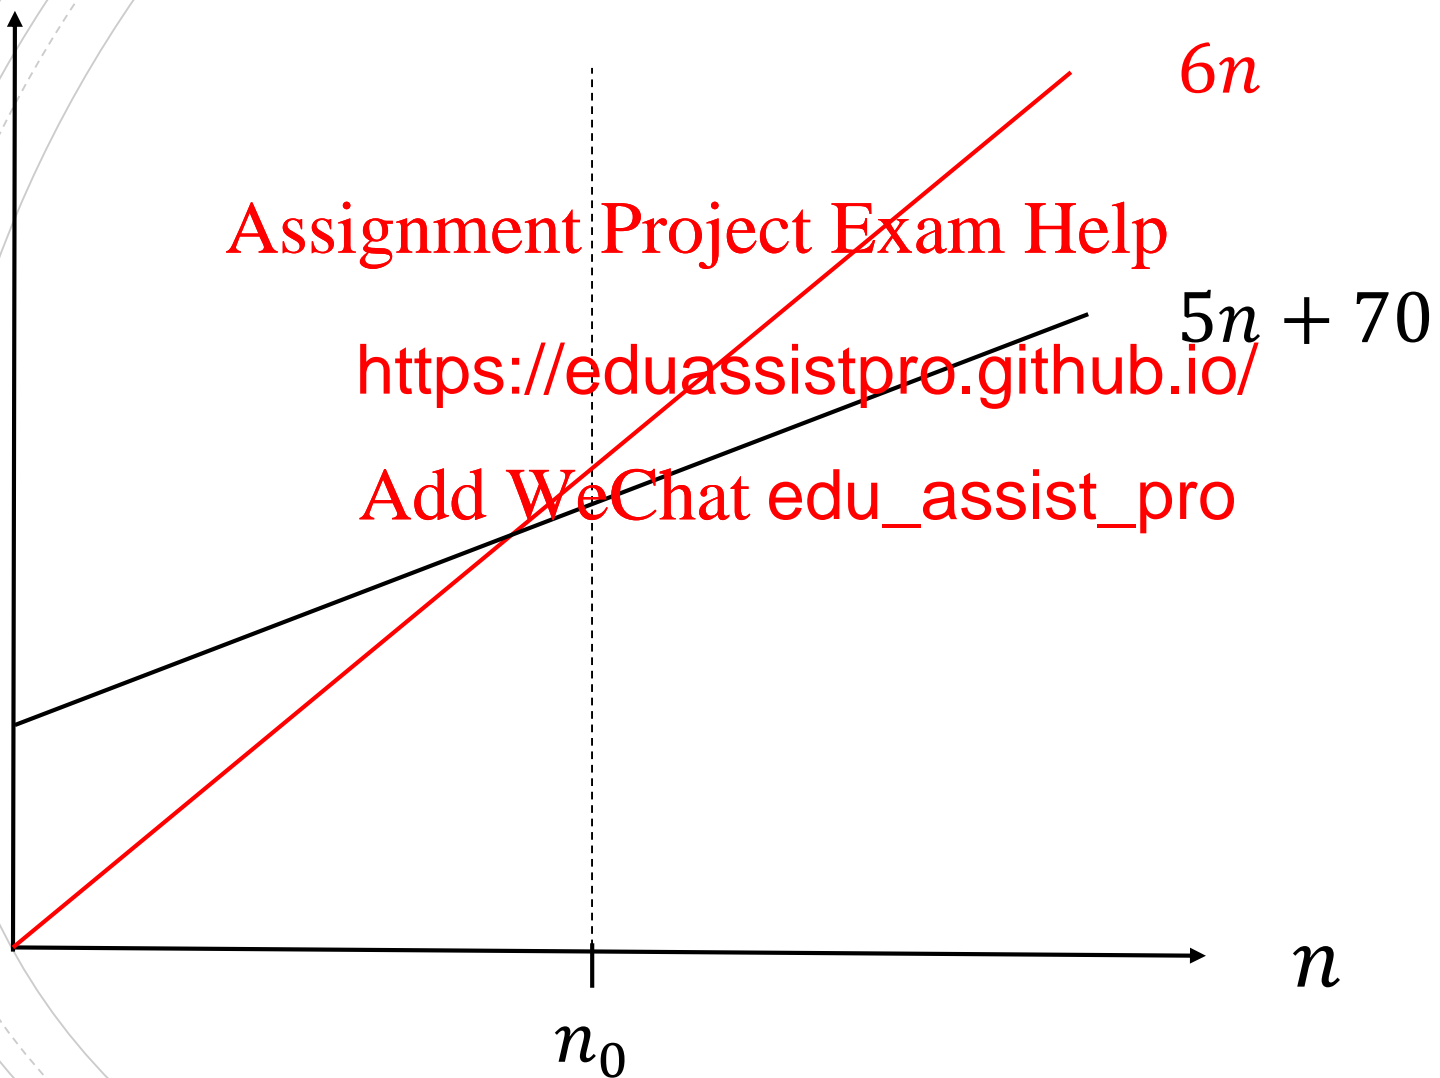

()

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

for all $n_0 \geq n$, $f(n) \leq g(n)$

EXAMPLE

EXAMPLE – PROOF

Claim: $5n + 70$ is asymptotically bounded above by $6n$.

To prove: show that there exists an n such that, for all $n \geq n_0$,

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE – PROOF

Claim: $5n + 70$ is asymptotically bounded above by $6n$.

To prove: show that there exists an n such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof: Note that,

Add WeChat edu_assist_pro

$$5n + 70 \leq 6n \Leftrightarrow 70 \leq n$$

“ \Leftrightarrow ” means “if and only if”
i.e. logical equivalence

EXAMPLE – PROOF

Claim: $5n + 70$ is asymptotically bounded above by $6n$.

To prove: show that there exists an n such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof: Note that,

Add WeChat edu_assist_pro

$$5n + 70 \leq 6n \iff 70 \leq n$$

Thus, we can use $n_0 = 70$.

TOWARDS A FORMAL DEFINITION OF BIG OH

Let $T(n)$ be a function that describes the time it takes for some algorithm on input size n .

Assignment Project Exam Help

We would like to express the asymptotic behavior of $T(n)$, as n becomes large i.e.

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Unlike with limits, we want to say that $T(n)$ grows like certain simpler functions such as $\log_2 n$, n , n^2 , ..., 2^n , etc.

FORMAL DEFINITION OF BIG O

Given a function $g(n)$, we denote by $O(g(n))$ (“big-oh of g of n ”) the following set of functions

Assignment Project Exam Help

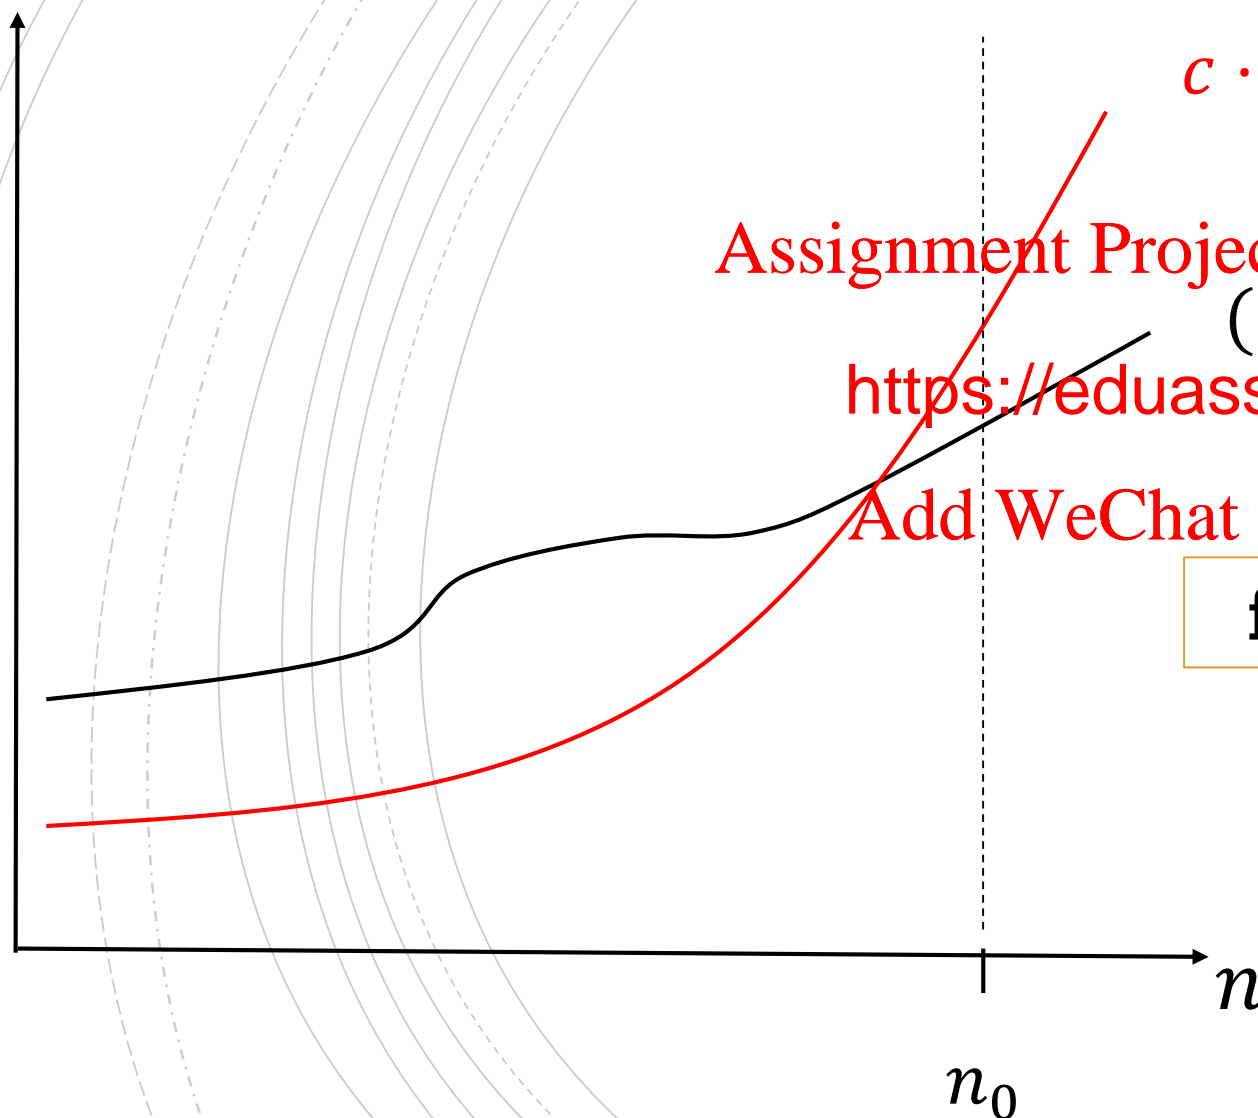

<https://eduassistpro.github.io/>

$O(g(n)) = \{f(n) : \text{there exist positive } c \text{ and } n_0 \text{ such that}$
 $f(n) \leq cg(n) \text{ for } n \geq n_0\}$

Add WeChat edu_assist_pro

We use the O -notation to describe an **asymptotic upper bound**.

GRAPHICALLY

$c \cdot g(n)$

Assignment Project Exam Help

()

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

for all $n_0 \geq n$, $f(n) \leq c \cdot g(n)$

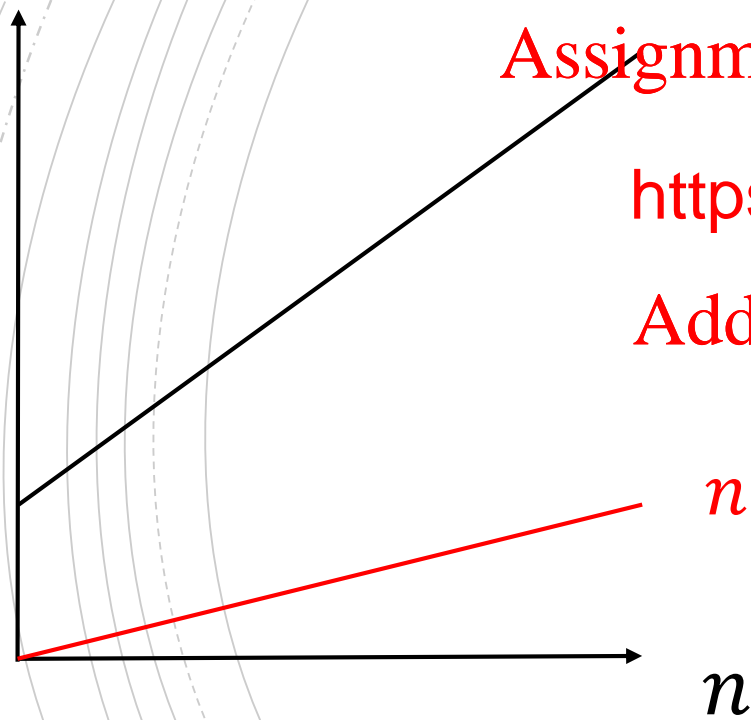

OBSERVATIONS

- Note that we sometime write $f(n) = O(g(n))$ (and say “ $f(n)$ is $O(g(n))$ ”) to indicate that the function $f(n)$ is a member of the set $O(g(n))$. (i.e. $f(n) \in O(g(n))$)

<https://eduassistpro.github.io/>

- Moreover, we sometimes find O -notation describe asymptotically tight bounds, but the O -notation by definition only claims **asymptotic upper bound**.

EXAMPLE

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro $5n + 70$ is $O(n)$.

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

To prove: show that there exists a constant n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof:

Add WeChat edu_assist_pro

$$5n + 70 \leq ?$$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof 1:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + 70n, \quad \text{if } n \geq 1$$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof 1:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + 70n, \quad \text{if } n \geq 1$$

$$= 75n$$

So we can pick $c = 75$ and $n_0 = 1$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof 2:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + 6n, \quad \text{if } n \geq 12$$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof 2:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + 6n, \quad \text{if } n \geq 12$$

$$= 11n$$

So we can pick $c = 11$ and $n_0 = 12$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

Proof 3:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + n, \quad \text{if } n \geq 70$$

EXAMPLE – PROOF

Claim: $5n + 70$ is $O(n)$.

Assignment Project Exam Help

To prove: show that there

exists n_0 such that, for all $n \geq n_0$,

<https://eduassistpro.github.io/>

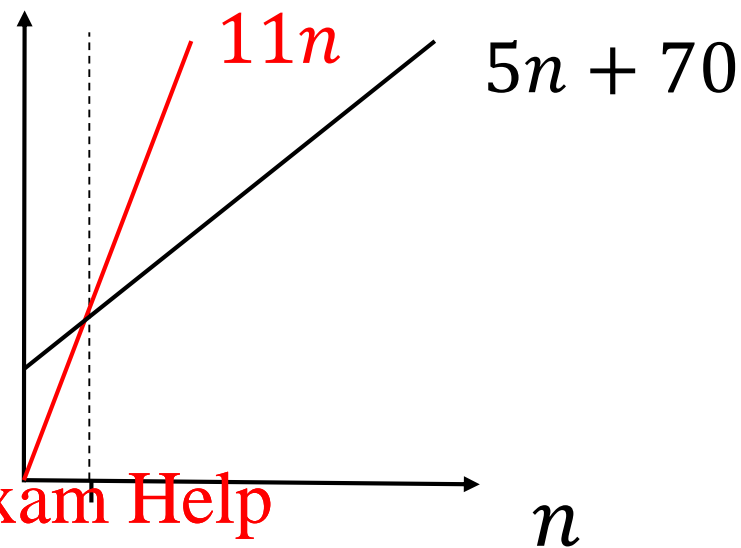

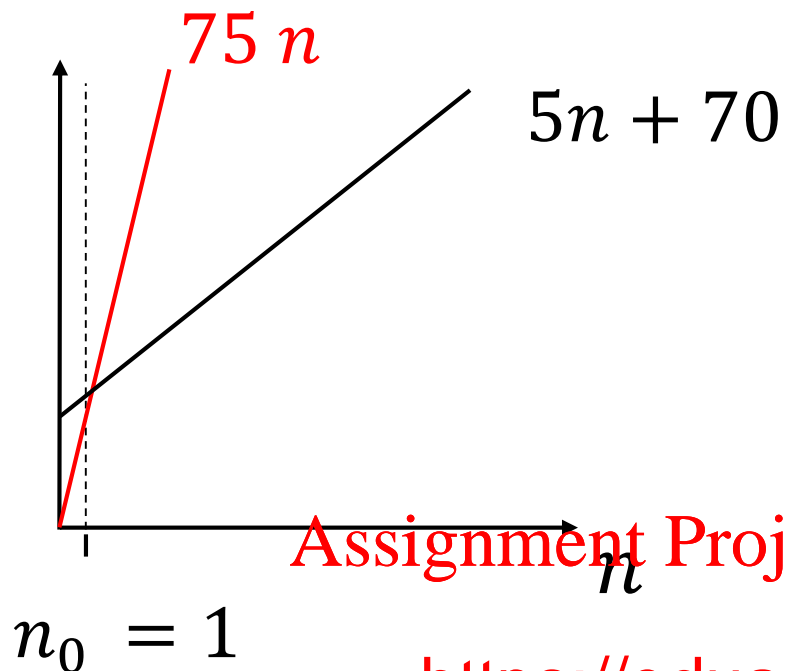

Proof 3:

Add WeChat edu_assist_pro

$$5n + 70 \leq 5n + n, \quad \text{if } n \geq 70$$

$$= 6n$$

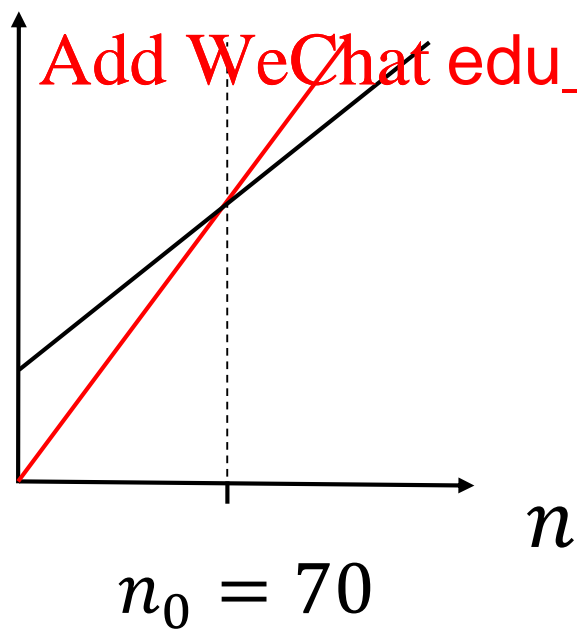

So we can pick $c = 6$ and $n_0 = 70$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE – INCORRECT PROOF

Claim: $5n + 70$ is $O(n)$.

Incorrect Proof:

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Q: Why is this incorrect?

EXAMPLE – INCORRECT PROOF

Claim: $5n + 70$ is $O(n)$.

Incorrect Proof:

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Q: Why is this incorrect?

A: Because we don't know which line follows logically from which.

EXAMPLE 2

Claim: $8n^2 - 17n + 46$ is $O(n^2)$.

Proof 1: $8n^2 - 17n$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE 2

Claim: $8n^2 - 17n + 46$ is $O(n^2)$.

Proof 1:

$$8n^2 - 17n$$

$$\leq 8n^2 + 46$$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE 2

Claim: $8n^2 - 17n + 46$ is $O(n^2)$.

Proof 1:

$$8n^2 - 17n$$

$$\leq 8n^2 + 46$$

$$\leq 54n^2$$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

So we can take $c = 54$ and $n_0 = 1$

EXAMPLE 2

Claim: $8n^2 - 17n + 46$ is $O(n^2)$.

Proof 2: $8n^2 - 17n$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE 2

Claim: $8n^2 - 17n + 46$ is $O(n^2)$.

Proof 2:

$$8n^2 - 17n$$

$$\leq 8n^2,$$

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

$\cdot 3 = 51 > 46$, which means

$n - 46 < 0$ for all $n \geq 3$

So we can take $c = 8$ and $n_0 = 3$

OBSERVATIONS

Suppose $f(n) = O(g(n))$ then:

Assignment Project Exam Help

- We can find multiple constants c and n_0 to prove it. What matters is that one <https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- These constants depend on $f(n)$. A different function belonging to $O(g(n))$ would usually require different constants.

WHAT DOES $O(1)$ MEAN?

We say $f(n)$ is $O(1)$, if there exist two positive constants n_0 and c such that, for all $n \geq n_0$,

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

So it just means that $f(n)$ is bounded by a constant.

BACK TO INSERTION SORT

At the beginning of today's lecture we found the function describing the worst-case running time for insertion sort.

Assignment Project Exam Help

<https://eduassistpro.github.io/>

where a , b , and c are some constants ≤ 0

Add WeChat edu_assist_pro

Claim: $T_{worst}(n)$ is $O(n^2)$

$T_{\text{worst}}(n)$ IS $O(n^2)$ – PROOF

Claim: $T_{\text{worst}}(n)$ is $O(n^2)$

Proof: $T_{\text{worst}}(n) = an^2 + bn + c$

$$\leq an^2 + b$$
$$= (a + b)n^2$$

<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

So we can take $c' = a + b$ and $n_0 = 1$.

OBSERVATION ON WORST-CASE UPPER BOUNDS

- When we use asymptotic notation with functions that represent the running time of an algorithm, we need to understand which running time we are referring to. Sometimes we might be interested in the worst-case running time, others in the running time no matter w

Assignment Project Exam Help

<https://eduassistpro.github.io/>

- Since O -notation describes an upper bound we use it to bound the worst-case running time of an algorithm, then we have a bound on the running time of the algorithm *on every input*.

Add WeChat edu_assist_pro

That is,

Since $T(n) \leq T_{worst}(n)$, if $T_{worst}(n) = O(g(n))$, then $T(n) = O(g(n))$

HOW ELSE TO USE THE DEFINITION

We can also use the formal definition to prove that a function $f(n)$ is not $O(g(n))$.

- For example, $6n^3 \notin O(n^2)$.

■ *Proof (by contradiction):* Suppose $6n^3 \in O(n^2)$, by definition there exists two positive constants c and n_0 such that

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

$$6n^3 \leq cn^2.$$

dividing both sides by n^2 and by 6, we get

$$n \leq \frac{c}{6}$$

which cannot possibly be true for arbitrarily large n .

TIGHT BOUNDS

- Since Big O is an upper bound, if $f(n)$ is $O(n)$, then it is also $O(n^2)$, $O(n^3)$, etc.
- That is, $O(n)$ is a subset of $O(n^3)$.
- When we ask for a tight upper bound on $f(n)$ though, we want the simple function $g(n)$ such that $O(g(n))$ is the smallest set that $f(n)$ belongs to.

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

FINAL GENERAL OBSERVATION

Never write $O(3n)$, $O(5 \log_2 n)$, etc.

Assignment Project Exam Help

Instead, write $O(n)$, $O(\log_2 n)$, etc.
<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Why? The point of O -notation is to *avoid* constant factors.

It is still *technically* correct to write the above. We just don't do it.
